Top Skills

Desenvolvimento full stack
Cloud & DevOps
Engenharia de dados

Certifications

Arquitetura CSS: descomplicando os problemas
Avançando com PHP: Arrays, Strings, Função e Web
HTML5 e CSS3 parte 1: crie uma página da Web
Front-end Development with React V2
HTML5 e CSS3 parte 4: avançando no CSS

Arthur Camponez Marinho

Full Stack Engineer | Next.js | ReactJS/Native | TypeScript | Tailwind/Nativewind | PostgreSQL | Node.JS/Express | MySQL | Prisma | Docker | Expo
Vila Velha, Espírito Santo, Brazil

Summary

Full-Stack, Frontend, and Mobile Developer with strong interpersonal skills, effective communication, and proven experience collaborating in multicultural and offshore environments. Experienced in designing, developing, and deploying modern web and mobile applications (SPAs), analytical platforms, process automations, and AI-powered solutions across financial operations, back-office workflows, strategic planning, and HR.Technical Expertise & Core Capabilities:Frontend, Mobile & UI/UX: Building modern, responsive, and accessible interfaces using React.js, Next.js, React Native, TypeScript, Tailwind CSS, and Three.js. Proficient in Figma and Adobe XD with a focus on User-Centered Design, accessibility, and aligning technical feasibility with business objectives.Backend & APIs: Architecting scalable APIs with Node.js, Fastify, Express, and TypeScript, including integrations with enterprise CRMs (Gatepay), JWT authentication, Prisma ORM, and unit testing with Jest. Strong commitment to SOLID principles, Clean Code, and microservices architecture.Data Engineering & Analytics: Database design and management across PostgreSQL, MySQL, TimescaleDB, Supabase, and Redis. Development of Data Warehouses using PostgreSQL and Airbyte, incremental ETL/ELT pipelines with watermark-based ingestion, and data transformations via dbt Core.AI, Automation & Internal Tools: Integrating Generative AI (Anthropic Claude, Tool Calling, Prompt Engineering) into automated HR candidate screening systems. Building workflow automations with n8n, analytical dashboards, sales funnel tracking, debt renegotiation settlement calculators, and real-time scheduling systems supporting ~100 daily active users.DevOps & Agile Methodology: Managing containerized environments via Docker and Portainer on AWS infrastructure, along with automated CI/CD pipelines using GitHub Actions and Amazon ECR. Experienced in Agile software practices (Jira, Git) and continuous delivery workflows.Fluent in Portuguese with Professional

Working Proficiency in English.Core Technologies: TypeScript, JavaScript, React.js, Next.js, React Native, Node.js, Fastify, Prisma, PostgreSQL, MySQL, TimescaleDB, Supabase, Redis, Airbyte, dbt Core, LLMs (Anthropic Claude), Docker, Portainer, AWS, GitHub Actions, Tailwind CSS, Three.js, Figma, n8n, and Git.

Experience

OCL - Olivieri, Carvalho & Lievori Advogados Associados

Full-Stack Developer with a Focus on AI Engineering & Data Analytics

March 2026 - Present (9 months)

Vitória, ES

Development of full-stack, analytics, and AI solutions for financial operations, back-office processes, strategic planning, and HR, integrating enterprise systems, automation, and data analytics.

Systems & Back-end: Development of APIs using Node.js, Fastify, and TypeScript, with integration into Gatepay's All-in-One CRM, MySQL and PostgreSQL databases, JWT authentication, Prisma ORM, and Redis.

Automation & Analytics: Development of internal business systems, reports, and dashboards for back-office operations and strategic planning, including contract installment calculations for debt settlement and renegotiation, sales funnel reports, and strategic goal tracking. Built a daily customer appointment scheduling system used by approximately 100 employees.

AI & HR: Developed a complete HR management system for candidate applications and resume management, featuring AI-powered candidate screening using Anthropic Claude, tool calling, SQL, and prompt engineering. Data Engineering: Data Warehouse development using PostgreSQL and Airbyte, incremental ETL/ELT pipelines with watermark-based ingestion, dbt Core, and TimescaleDB.

Front-end & DevOps: Development of analytical dashboards, web interfaces, and OCL's landing page using React, TypeScript, and Tailwind CSS. Management of Docker environments and applications through Portainer on AWS servers, with CI/CD pipelines using GitHub Actions and Amazon ECR.

Technologies: TypeScript, JavaScript, React, Next.js, Node.js, Fastify, Prisma, MySQL, PostgreSQL, Airbyte, dbt Core, Redis, Anthropic Claude, LLMs, Docker, Portainer, AWS, GitHub Actions, Tailwind CSS, and SQL.

NOVAsyn
Co-founder & CTO
December 2025 - Present (1 year)
Vila Velha, Espírito Santo, Brasil

Co-founder and Head of Technology at NOVAsyn, responsible for leading the technical side of projects from the first client contact to production deployment:

- Working directly with clients and stakeholders to understand business needs, gather requirements and define project scope.
- Translating business problems into well-structured technical solutions, including architecture, data models, workflows and system specifications.
- Producing and maintaining technical and functional documentation, such as requirements, diagrams, project flows and implementation details.
- Developing full-stack applications using React, Next.js, Node.js, Express and TypeScript.
- Building APIs, integrations and core application logic using relational databases such as PostgreSQL and MySQL.
- Applying AI-assisted development with LLMs to accelerate project structure, explore solutions and improve development speed.
- Working directly on critical parts of the codebase to ensure performance, reliability and maintainability.
- Designing UI/UX flows in Figma, including wireframes, user flows and high-fidelity prototypes to guide development.
- Managing self-hosted deployments using Docker, Nginx and Coolify, focusing on control, scalability and efficiency.
- Defining technical standards, development processes and project organization across the company.
- Acting as a bridge between business and technology to transform ideas into real, functional digital products.

Banestes Asset Management
IT Analyst
February 2024 - January 2026 (2 years)
Vitória, Espirito Santo, Brasil

Actively involved in the design and development of mobile applications for the financial market, with a focus on investments, data analysis and user-centered digital solutions:

- Participating in the full product lifecycle, from user research and requirements discovery to development and final delivery.
- Designing UX/UI interfaces and experiences aligned with usability, visual clarity and business goals.
- Developing and maintaining mobile applications to support financial processes, analytics and digital products.
- Building and maintaining websites, contributing to modern, functional and responsive interfaces.
- Using low-code platforms to accelerate solution development and validate ideas more efficiently.
- Leading and supporting a team of interns, organizing contributions, reviewing deliveries and ensuring smooth collaboration throughout project execution.
- Collaborating with internal departments to understand business needs, propose solutions and transform requirements into efficient digital products.
- Working with a strong focus on quality, user impact and efficiency in the delivery of digital solutions.

Solitude Mountain Resort
Work Experience
December 2022 - March 2023 (4 months)
Utah, United States

Banestes
Software development intern
May 2022 - November 2022 (7 months)
Vitoria, Espirito Santo, Brasil

Assist in the analysis, development and implementation of software solutions
Develop and apply knowledge related to software development, digital transformation and systems integration.

Education

Universidade Vila Velha - UVV
Bacharelado, Ciência da Computação · (August 2023 - August 2027)

Universidade Vila Velha - UVV

Bacharelado, Tecnologia em Engenharia da Computação · (February 2022 - December 2022)
